TITLE : Skill and Job Recommender

DOMAIN NAME : Cloud Application Development

LEADER NAME : YUVASHREE K

TEAM MEMBERS

NAME : SHERBIA S
SRI PRADEEPA K
VAIRABHARANI S

MENTOR NAME : JANANI. S

PROBLEM STATEMENT :

Now a days many graduates are in unemployment situation. To rectify this problem we have to recommend many job opportunities through online in everywhere. We assure this application make them to search job easily also to gain new skills means it is a good recommender.

PROPOSED IDEAS:

- We have an idea to recommend many jobs from many companies for which role you want and also it show number of vacancies available in companies. Surely it is an application for all domain graduates.
- Our project to develop an end-to-end web application capable of displaying the current job openings based on the user skillset. The user and their information are stored in the Database. An alert is sent when there is an opening based on the user skillset.
- In this we will create a chatbot option to user can approach anytime about their queries.
- We can use a job search API to get the current job openings in the market which will fetch the data directly from the webpage.
